

Abstract

The invention provides a method and a system for forwarding a telephone call. The inventive method includes receiving a telephone call from a calling party line to a called party line, determining a location of the called party, determining a proximity of the location of the called party to one or more subscriber locations, and directing the telephone call to the one or more subscriber locations based on the determined proximity. The subscriber locations may be predefined by the called party. The location of the called party may be determined using a global position system and/or a radio frequency signal, for example.
